

My work discusses the question “Can anything become art?” My answer to this question is “Mostly yes,” because I think art is about creativity and imagination of the artists, and the viewers’ perception. As long as these two circumstances are there, then anything can be transform into an art piece.

In this context, I created this art work out of a QR code by beveling out and giving some colors. With this art work, I wanted to show the viewer that how digitally readable data can be formed into 3D sculptures, and become digitally unreadable but appeal to the eyes. If a rock can be transformed into art, why not QR code?

This QR code contains the data of this artist statement. This required me to write my artist statement before the creation of the work. I generated the QR code after writing the statement, then I made an image trace on Illustrator and imported it into Maya Software. This way, I could leave the answer of the question “Can anything become art?” to the viewers.
